Offering outstanding technical support along with dependable delivery and quality, Microchip serves over 70,000 customers in more than 65 countries who are designing high-volume embedded control applications in the consumer, automotive, office automation, communications and industrial control markets worldwide.

8-bit PIC® Microcontrollers

8-bit PIC microcontrollers provide developers with an easy migration path from 6 to 100 pins, with little or no code change required. The 8-bit PIC MCU portfolio offers product families with varying levels of intelligent integration. We offer devices with Core Independent Peripherals (CLC, CWG/COG, NCO, PSMC, ZCD, and more) that require little to no CPU intervention—freeing the CPU to perform other application tasks, Intelligent Analog (op amps, comparators, ADC, DAC, CTMU), human interface (LCD, mTouch™ technology) and communications (Ethernet, I²C™, SPI, USB, CAN, and LIN EUSARTs). For more information visit: www.microchip.com/8bit.

16-bit PIC Microcontrollers

The 16-bit PIC24 family is comprised of two sub-families. The PIC24F offers a cost-effective low-power step up in performance, memory and peripherals for many applications that are pushing the envelope of 8-bit microcontroller capabilities. For more demanding applications, the PIC24H/E offers up to 70 MIPS performance, up to 150°C operation, more memory and additional peripherals, such as CAN communication modules. For more information visit: www.microchip.com/16bit.

dsPIC® Digital Signal Controllers

The dsPIC family of Digital Signal Controllers (DSCs) features a fully implemented digital signal processor (DSP) engine, with up to 70 MIPS performance, C compiler-friendly design and a familiar microcontroller architecture and design environment. The dsPIC 16-bit Flash DSCs provide the industry's highest performance, and have features supporting motor control, digital power conversion, speech and audio, intelligent sensing and general purpose embedded control applications.
